

PYTHONX®

O'Neal Manufacturing Services (OMS) offers robotic beam line processing for structural steel fabrication. Our PythonX® makes quick work of beams, channels, angle iron, square and rectangular HSS, flat bar, strip plate, and stair stringers. We provide multi-faceted cutting services for the leanest solution to your structural steel profiles.

Receive highly accurate cutting results including bolt holes, copes, cut-to-length, miter cuts, notches & cutouts, slots, bevel angles, and T-beams, along with coping, notching, mitering, tapping, and countersinking. Increase your manufacturing capacity and optimize your workflow with fast and precise structural steel processing from OMS.
